

PROPERTYIQ AI ADVISOR ROADMAP

Version 1.0

Vision

PropertyIQ is a global property decision-support platform.

The platform combines deterministic property assessment with AI-powered explanation and advisory capabilities.

The long-term objective is to provide consistent property intelligence across multiple countries while respecting local market practices and regulations.

Guiding Principle

PropertyIQ determines.

PropertyIQ AI Advisor explains.

The deterministic PropertyIQ assessment engine remains the authoritative source of truth.

The AI Advisor complements—but never replaces—the assessment engine.

Evolution Roadmap

Phase 1 — Global Core

Build the universal assessment platform.

Components include:

- Valuation
- Inventory
- Developer Quality
- Buyer Protection
- Buyer Advisory
- Report Engine
- AI Advisor

These capabilities should remain globally consistent.

Phase 2 — Country Packs

Introduce jurisdiction-specific knowledge without modifying the core assessment engine.

Country Packs may include:

- Regulatory frameworks
- Property registration systems
- Local terminology
- Ownership structures
- Consumer protection mechanisms
- Typical due diligence practices
- Financing practices
- Tax considerations
- Market-specific guidance

The assessment methodology remains unchanged.

Country Packs provide local context.

Phase 3 — Market Intelligence

Expand PropertyIQ with richer market information.

Potential capabilities include:

- Historical pricing
- Supply trends
- Rental market analysis
- Infrastructure developments
- Neighborhood insights
- Market cycle indicators

These features enhance—not replace—the core assessment.

Phase 4 — Commercial Intelligence

Support professional users.

Potential capabilities include:

- Portfolio analysis
- Multi-property comparison
- Investor dashboards
- Developer benchmarking
- Builder reputation insights
- Commercial property assessment

Phase 5 — Enterprise Platform

Extend PropertyIQ for enterprise customers.

Potential capabilities include:

- Organization workspaces
- Team collaboration
- Report management
- APIs
- White-label deployment
- Enterprise governance
- Audit capabilities

Architecture Principles

The PropertyIQ Core should remain stable.

Country-specific behavior should be implemented through Country Packs rather than modifications to the core assessment engine.

This separation enables consistent assessment methodology while allowing jurisdiction-aware explanations, terminology, and due diligence guidance.

Long-Term Objective

PropertyIQ aims to become a globally trusted property decision-support platform.

The platform should provide:

- Consistent methodology
- Transparent reasoning
- Jurisdiction-aware guidance
- Professional reporting
- AI-assisted explanation

while maintaining independence, transparency, and evidence-based recommendations.
